Summary

Recent Software Engineering graduate bridging practical DevOps experience with a deep understanding of hardware performance, cloud infrastructure and cloud security. Skilled in automating application delivery and architecting AWS environments, with active research in SoC thermal constraints and high-performance computing.

Education

Bachelor of Science in Software Engineering

Shaheed Zulfiqar Ali Bhutto Institute of Science and Technology

August 2022 - May 2026

CGPA: 3.49

Technical Skills

Programming Language: Python & Flask

Cloud Platform: Amazon Web Services (AWS): EC2, S3, VPC, IAM, ALB, CodeDeploy, CloudWatch

Containerization & Orchestration: Docker, Kubernetes, GitHub Actions

Version Control: Git, GitHub

Operating Systems and Administration: Ubuntu, Fedora

Publications & Research

Native Mixed Reality Compositing on Meta Quest 3 - ([ArXiv](#))

Sep 2025

A Quantitative Feasibility Study of ARM-Based SoCs and Thermal Headroom

- Evaluated native MR compositing feasibility on the Meta Quest 3 to untether content creation from external PCs. Benchmarked the thermal and processing constraints of the Snapdragon XR2 Gen 2 against competing ARM SoCs, establishing crucial performance baselines for future standalone, high-fidelity MR systems.

Professional Experience

DevOps Intern

Nov 2025 - Dec 2025

CloudLem - Internship - ([Letter of Recommendation](#))

Gilgit Remote, Pakistan

- **Infrastructure & Security:** Designed deployment architectures and enforced security best practices using GitHub Secrets to protect production environments.
- **Server Configuration & High Availability:** Maintained reliable environments for containerized apps, ensuring high availability and efficient image distribution via DockerHub.
- **Monitoring & Incident Prevention:** Automated pipelines using GitHub Actions, and proactively monitored and resolved deployment issues to prevent incidents and maintain system stability.

Academic & Technical Projects

GuardianLink – Women’s Safety Application

2026

Final Year Project

- Architected and developed a comprehensive safety application featuring real-time GPS tracking and secure audio recording.
- Engineered a resilient communication architecture by implementing an SMS fallback mechanism to ensure critical alert delivery in low-connectivity environments.

Automated CICD with AWS CodeDeploy & GitHubActions

2025

Personal Project ([Project Link](#))

- Built an end-to-end CI/CD pipeline using GitHub Actions and AWS CodeDeploy to automate the build, test, and deployment of a Dockerized Flask application.
- Automated Docker image creation and versioning with GitHub Actions workflows, integrating secure deployment pipelines using AWS S3 and EC2 instances.

- Integrated AWS S3 and CodeDeploy for storing build artifacts and executing zero-downtime deployments to EC2 instances.

Optimizing Traffic Distribution with AWS ALB

Personal Project ([Project Link](#))

- Implemented AWS ALB to distribute incoming traffic across multiple EC2 instances, improving application performance and reducing latency.
- Set up ALB to distribute traffic to multiple EC2 instances based on routing rules.
- Improved application availability by distributing incoming traffic to healthy EC2 instances.
- Applied auto-scaling policies to dynamically adjust the number of EC2 instances based on load.

Certifications

Cybersecurity Essentials (LFC108) - ([The Linux Foundation](#))

2026

- Gained foundational knowledge of cybersecurity awareness, malware identification, breach prevention, and mobile/social network security.
- Learned practical security precautions and strategies to safeguard personal and professional data from exposure and online compromises.

Introduction to Containers w/ Docker, Kubernetes & OpenShift - ([IBM/Coursera](#))

2025

- Learned to build and deploy applications using Docker, Kubernetes, and OpenShift.
- Gained expertise in leveraging YAML for container orchestration and managing cloud-native applications.

AWS Cloud Technical Essentials - ([AWS/Coursera](#))

2025

- Gained foundational knowledge of AWS core services including EC2, S3, RDS, IAM, Lambda & CloudWatch.
- Learned how to architect basic cloud infrastructure using AWS best practices for scalability, security, and cost-efficiency.
- Practiced navigating the AWS Management Console and using the AWS CLI for resource provisioning.
