

BugID	BUG_001
Mapped requirement/User Story	Security / Role-Based Access Control (RBAC)
Title	ESS user can bypass UI restrictions and access Admin User Management via direct URL
Steps	1. Open browser and navigate to <code>https://opensource-demo.orangehrmlive.com/</code> 2. Log in using standard ESS credentials. 3. Click on the browser's address bar. 4. Append <code>/web/index.php/admin/viewSystemUsers</code> to the base URL and press Enter.
Pre-Condition	User must have an active ESS account. User must be logged into the application.
Expected Result	The system should validate the user's role token and throw an HTTP 403 Forbidden error or safely redirect the user back to the ESS Dashboard.
Actual Result	The system fails to validate the role on the direct request. The Admin User Management dashboard loads successfully, exposing the system user list to a standard employee.
Priority	Critical
Severity	High
