SUMMARY

Final-year Software Engineering student with hands-on DevOps internship experience. Adept at streamlining application delivery through robust CI/CD pipelines and container orchestration Docker, Kubernetes. Bringing practical expertise in AWS architecture (VPC, EC2, S3, ALB), a strong foundation in Linux system administration, and modern deployment strategies for reliable cloud-native applications.

TECHNICAL SKILLS

Programming Language: Python & Flask
Cloud Platform: Amazon Web Services (AWS): EC2, S3, VPC, IAM, ALB, AWS CodeDeploy
Containerization & Orchestration: Docker, Kubernetes, GitHub Actions
Version Control: Git, GitHub

EDUCATION

Bachelor of Science in Software Engineering August 2022 - May 2026
Shaheed Zulfikar Ali Bhutto Institute of Science and Technology CGPA: 3.46

EXPERIENCE

DevOps Intern Nov 2025 - Dec 2025
CloudLem - Internship ([Letter of Recommendation](#)) Gilgit Remote, Pakistan

- Automated pipelines using GitHub Actions, enforcing a Feature Branch workflow and Branch Protection Rules to ensure stable, production-ready code.
- Container Orchestration: Containerized Python/Flask applications using Docker and Docker Compose, automating image builds and distribution via DockerHub.
- Deployment Security and Architecture: Designed end-to-end deployment architectures and secured sensitive credentials using GitHub Repository Secrets to protect the production environment.

PROJECTS

Automated CICD with AWS CodeDeploy & GitHubActions
Personal Project ([Project Link](#))

- Built an end-to-end CI/CD pipeline using GitHub Actions and AWS CodeDeploy to automate the build, test, and deployment of a Dockerized Flask application.
- Automated Docker image creation and versioning with GitHub Actions workflows, integrating secure deployment pipelines using AWS S3 and EC2 instances.
- Integrated AWS S3 and CodeDeploy for storing build artifacts and executing zero-downtime deployments to EC2 instances.

Optimizing Traffic Distribution with AWS ALB
Personal Project ([Project Link](#))

- Implemented AWS ALB to distribute incoming traffic across multiple EC2 instances, improving application performance and reducing latency.
- Set up ALB to distribute traffic to multiple EC2 instances based on routing rules.
- Improved application availability by distributing incoming traffic to healthy EC2 instances.
- Applied auto-scaling policies to dynamically adjust the number of EC2 instances based on load.

PUBLICATIONS

Native Mixed Reality Compositing on Meta Quest 3 ([ArXiv](#)) Sep 2025
A Quantitative Feasibility Study of ARM-Based SoCs and Thermal Headroom

- Evaluated native MR compositing feasibility on the Meta Quest 3 to untether content creation from external PCs. Benchmarked the thermal and processing constraints of the Snapdragon XR2 Gen 2 against competing ARM SoCs, establishing crucial performance baselines for future standalone, high-fidelity MR systems.

CERTIFICATIONS

Introduction to Containers w/ Docker, Kubernetes & OpenShift - [IBM/Coursera](#)

2025

- Learned to build and deploy applications using Docker, Kubernetes, and OpenShift.
- Gained expertise in leveraging YAML for container orchestration and managing cloud-native applications.

AWS Cloud Technical Essentials -[AWS/Coursera](#)

2025

- Gained foundational knowledge of AWS core services including EC2, S3, RDS, IAM, and Lambda.
- Learned how to architect basic cloud infrastructure using AWS best practices for scalability, security, and cost-efficiency.
- Practiced navigating the AWS Management Console and using the AWS CLI for resource provisioning.
